

Chemical Storeroom

Project: Bega Cheese

Category: Industrial Flooring

Completion

Date: September 2006

Product: Rhino Linings Duraspray

Job Description

This new building was designed to store hazardous acidic chemicals.

The floor of the building was planned in such a way as to contain any spills that may occur. This was achieved by having the highest part of the floor in the middle of the building and sloping down toward 4 storage pits in 4 corners.

Rhino Linings Duraspray was used with 24 grade allox for its not slip properties, addressing OH&S requirements. An area of 158 square meters including 2-meter high walls was sprayed.

Management of the premises were more than impressed with the outcome and will be using Rhino Linings in other areas in future.
