

Container Storage Protection

Project: Corrosion Protection

Category: Waterproofing

Completion

Date: July 2009

Product: Rhino TUFF STUFF[®] polyurethane

Dealer: Rhino Linings West Brisbane

Job Description:

Rhino Linings West Brisbane worked closely with several container companies in the greater Brisbane area.

A customer was having continual leakage and corrosion problems on the roof areas of containers operating in wet environments. Leaks and corrosion was developing very quickly on installed containers when using standard paint and surface preparation.

Rhino Linings West Brisbane carried out careful surface preparation work to the roof of these containers then sprayed 3mm of Rhino's famous elastomeric coating called Rhino TUFF STUFF[®], followed by a coating of Rhino Aliphatic Top Coat for colour fastness to the customers colour code. The end result was a membrane that did not crack, warp or peel during the operation of these containers.

Rhino TUFF STUFF[®] has been tested to and exceeds the requirements of AS4858:2004 'Wet Area Membranes' (tested by CSIRO).
