

## Heavy Vehicle Workshop Pit

**Project:** Workshop Flooring

**Category:** Impact & Abrasion Protection

**Completion**

**Date:** June 2008

**Product:** Rhino Linings Duraspray

**Dealer:** Rhino Linings West Brisbane, Archerfield, Qld

### Job Description:

Rhino Linings was specified for inclusion in the workshop bay pits of this newly built, heavy vehicle mechanical workshop.

Heavy Vehicle workshop pits are a necessity in large workshops particularly when needing to access the undercarriage of large vehicles with ease and to reduce OH&S Issues. General service work could include grease and oil changes, brake inspections and differential changes.

This heavy vehicle workshop required their pit to be coated with Rhino Duraspray for a number of reasons:

1. Rhino Duraspray's impact resistance and abrasion protective abilities.
2. Rhino spray applied linings provide a seamless barrier, thereby stopping the leaching of oil, petrol, hydrocarbons and chemical and waste spills into the cement.
3. To meet WH&S Standards, slip resistant particles were also added to the sprayed membrane using Rhino's innovative aggregate gun assembly.
