

Fuel Tanker.

Project: US Army Fuel Tanks

Category: Armoured Protection

Completion

Date: 2005 and now ongoing

Product: Battle Jacket

Dealer: US Defence Dept and Rhino Linings USA

Job Description

An urgent requirement existed in 2004 for the US Army to prevent and/or minimize fuel leakage of fuel tankers due to small-arms fire. Fuel leakage from the tankers resulted in hazardous conditions to troops transporting fuel as well as operational risks caused by the lack of fuel.

To meet these needs, Rhino Linings and High Impact Technology developed the Battle Jacket -Fuel Containment System (FCS) to satisfy this requirement.

The Battle Jacket - Fuel Containment System (FCS) is the appropriate technology to bring to any vulnerable vehicular, train or ship based fuel tank as well as, infrastructure elements such as storage tanks and possibly pipelines.
