

QAF Meat Industries- Piggery

Project: Corrosion Protection

Category: Commercial Linings

Completion

Date: Mid 2007

Product: Tuff Stuff and Aliphatic Top Coat

Job Description

The Corowa based Piggery is one of the largest in the southern hemisphere. Continual wash down procedures for food safety identified the early onset of corrosion in some production areas.

Once identified, these areas were isolated, ground back to the original substrate and primed with RhinoPrime 251 and RL315.

Rhino Linings Tuff Stuff, pigmented in white was applied at approximately 2mm thick. A white Aliphatic Top Coat was then applied to remove any possible colour change due to the use of harsh cleaning compounds. This area was Completed on a single day over the weekend.
