

RAAF Secondary Containment – AVTUR Fuel.

Project: RAAF Richmond Airbase up-grade

Category: Secondary Containment

Completion

Date: July/August 2005

Product: Duraspray

Dealer: Rhino Linings Australasia

Before...

After...

Job Description

In order to meet Environmental Protection Agency guidelines the Royal Australian Air Force investigated several options to seal the existing concrete bund of this AVTUR Fuel Farm. After careful consideration of the immersion test results, the operational advantages and the application advantages, Rhino Linings was chosen to provide a seamless, impermeable lining that was capable of bridging cracks and withstanding substrate movement.

Being spray applied and seamless the Rhino Linings membrane easily seals around pipes and support structures. Rhino Linings ability to transcend different substrates makes it ideal for secondary containment where multiple substrates are involved in the one application.
