

## Riverstone Water Tanks – Meat Rendering Plant

**Project:** Concrete Tank Restoration

**Category:** Waterproofing

**Completion**

**Date:** March 2008

**Product:** RhinoGuard 2195

**Dealer:** Rhino Linings Westside, Sydney NSW

### Job Description:

Water conservation and recycling in today's environment is a must for local industry. This industry was using large amounts of fresh water daily for cleaning purposes, which meant that onsite storage was a necessity.

Monitoring these storage tanks found that both water tanks were leaking quite badly below the ground. As a result, Rhino Linings Westside was contracted to address the problem.

Being in a confined space, preplanning, control measures and preparation for spraying was imperative.

All concrete substrate imperfections were treated; the tank was then primed and sprayed with RhinoGuard 2195 providing a seamless, waterproof chemical resistant lining thereby extending the life of the tank for years to come.
