

Rhino Linings®

CASE STUDY

Category: Sea Container Bunds

Project: Royal Wolf

Applicator: Rhino Linings Perth

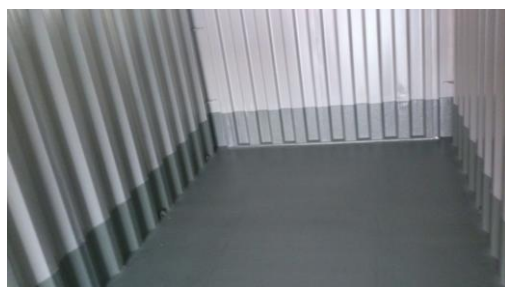

Rhino Products: Rhino Duraspray

Designed to endure long trips at sea, shipping containers need to be extremely durable and secure when it comes to resisting both the elements and pest. Containers are also perfect for permanent or temporary storage, pop up shops, onsite offices and even short-term accommodation housing by installing accessories such as: Whirly Birds, plumbing, electricity, air-conditioning, shelving, doors and vents.

Royal Wolf provide containers which more than meet the above features and benefits and further extend customer options with the installation of a chemical and abrasion resistant bunding in their 'Hazardous Goods, Liquids and Chemical Storage' containers. These spray applied container bunds help customers manage the risk of harsh penalties when dangerous goods, liquids and chemicals are not stored correctly.

Rhino Linings Perth has spray applied bunds in a number of Royal Wolf containers ranging in sizes from 8ft to the large 40ft containers. The floors on these containers vary with some being marine ply and others steel. Depending on the floor substrate, Rhino Linings Perth prime the surface with SP150 or RhinoPrime 251 then coat the floor with 4mm of Duraspray resulting in seamless, fully bonded chemical resistant liner.
