

Tourism Visitor Train

Project: Visitor Train Roof

Category: Waterproofing

Completion

Date: Mid 2006

Product: Duraspray 4mm DFT

Dealer: Rhino Lining Top End

Job Description

A Northern Territory Wildlife Park needed a quick fix to their problem of leaking roofs. These trains were brand new and because of the jolting around the park roads the fibreglass seams were cracking.

Management of the Wildlife Park sought out Rhino Linings for a solution, stipulating the application was to be colour coded to the original finish. Duraspray was recommended in order to add additional strength to the roof and offer excellent waterproofing properties.
