

TRANSPORT TRAILER

Project: Industrial Trailer

Category: Impact Protection

Completion

Date: June 2005

System: Rhino Linings TUFF STUFF

Job Description

This trailer was manufactured to transport large pre-cast concrete slabs. The manufacturer required a coating that would provide superior impact and abrasion protection against the weight of the concrete slabs. Rhino Linings TUFF STUFF was chosen due to its excellent impact and abrasion resistance.

In addition, Rhino Linings TUFF STUFF can be spray applied to any thickness in one application allowing the applicator to make allowances for trailer supports that were not aligned correctly. The finished surfaces on the trailer supports are now all aligned and provide a tough impact and abrasion resistant surface for the concrete slabs to rest against during transport.
